

# Developer Testing Object-Oriented Software with Emphasis on Java

Workshop Moderator:  
Donald Firesmith  
Storage Technology Corp., USA

This workshop will provide a forum for discussion of the techniques, tools, and responsibilities for performing class and package level testing. Participants will also discuss how current testing techniques should be modified in terms of Java. Specifically, participants will attempt to answer questions such as "How will testing be impacted by Java's support for encapsulation, interfaces global optimization in light of web support, etc?" The workshop will also address the issue of Java test tool immaturity?
