

New Dimensions in OA&D: UML/OML and Beyond

Panel Moderator:
Donald Firesmith
Storage Technology Corp., USA

Although the OMG has officially adopted UML as the industry-standard notation for object modeling, it also has some significant critics. The OPEN Consortium has developed OML as an enhancement/extension answering some of the criticisms that have been raised against UML.

This panel will discuss the impact on the object community of the standardization of notation, metamodel, and method that has been taking place the last few years. It will also discuss some of the differences between standard UML and OML, and prognosticate on where the industry is likely to go over the next few years.
